

TMS Therapy Was Searched Online Thousands of Times in the Last Month.

Be ready when patients ask you about it.

Patients and their families are savvy consumers. Just like you, they research ways to solve their problems. And when antidepressants don't work, they search for alternative therapies. Be ready to say yes when they ask you if you provide TMS.

MagVenture Transcranial Magnetic Stimulation (TMS) for Major Depressive Disorder¹:

- ✓ Delivers a 49% response rate and 32% remission rate* for MDD after failure of two or more antidepressants²
- ✓ Reimbursed by most insurance companies
- ✓ NO per-use treatment fees back to the manufacturer
- ✓ Non-invasive, no anesthesia, and does not affect cognitive function
- ✓ Safe technique: most common side effects include mild discomfort and transient headache
- ✓ Can pay for itself with just ONE patient per month³

Scan to get in touch:

Our systems are used at prolific and highly showcased TMS services across the U.S. Let's get one in your practice.

1. MagVenture Transcranial Magnetic Stimulation (TMS) Therapy is indicated for the treatment of major depressive disorder (MDD) in adult patients who have failed to receive satisfactory improvement from prior antidepressant medication in the current episode.
2. Blumberger DM, Vila-Rodriguez F, Thorpe KE, et al. *Lancet*. 2018 Apr 28;391(10131):1683-1692.
3. Assuming 60-month financing, a monthly payment of \$2,000, and reimbursement at \$115 per session. Standard 36-session depression protocol.

* The response rate is defined by a $\geq 50\%$ reduction from baseline of depressive symptoms on the HRSD-17 scale.
