

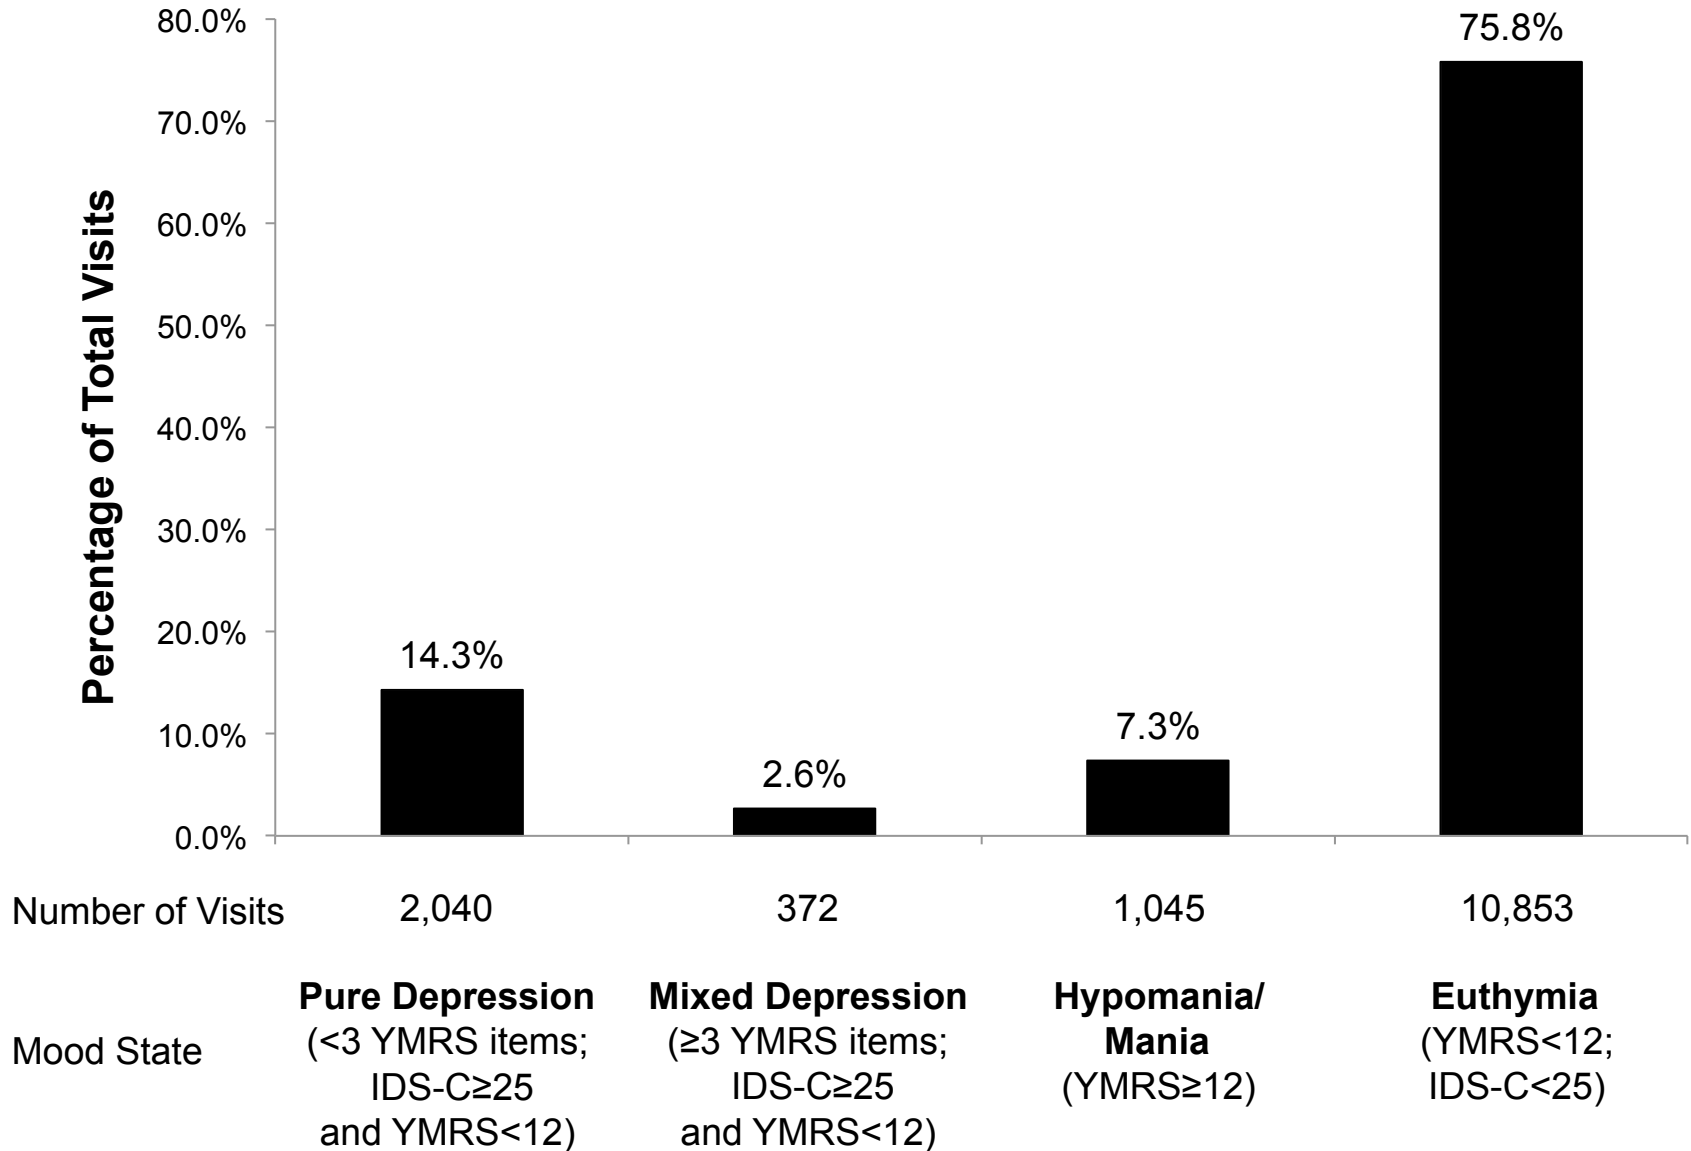

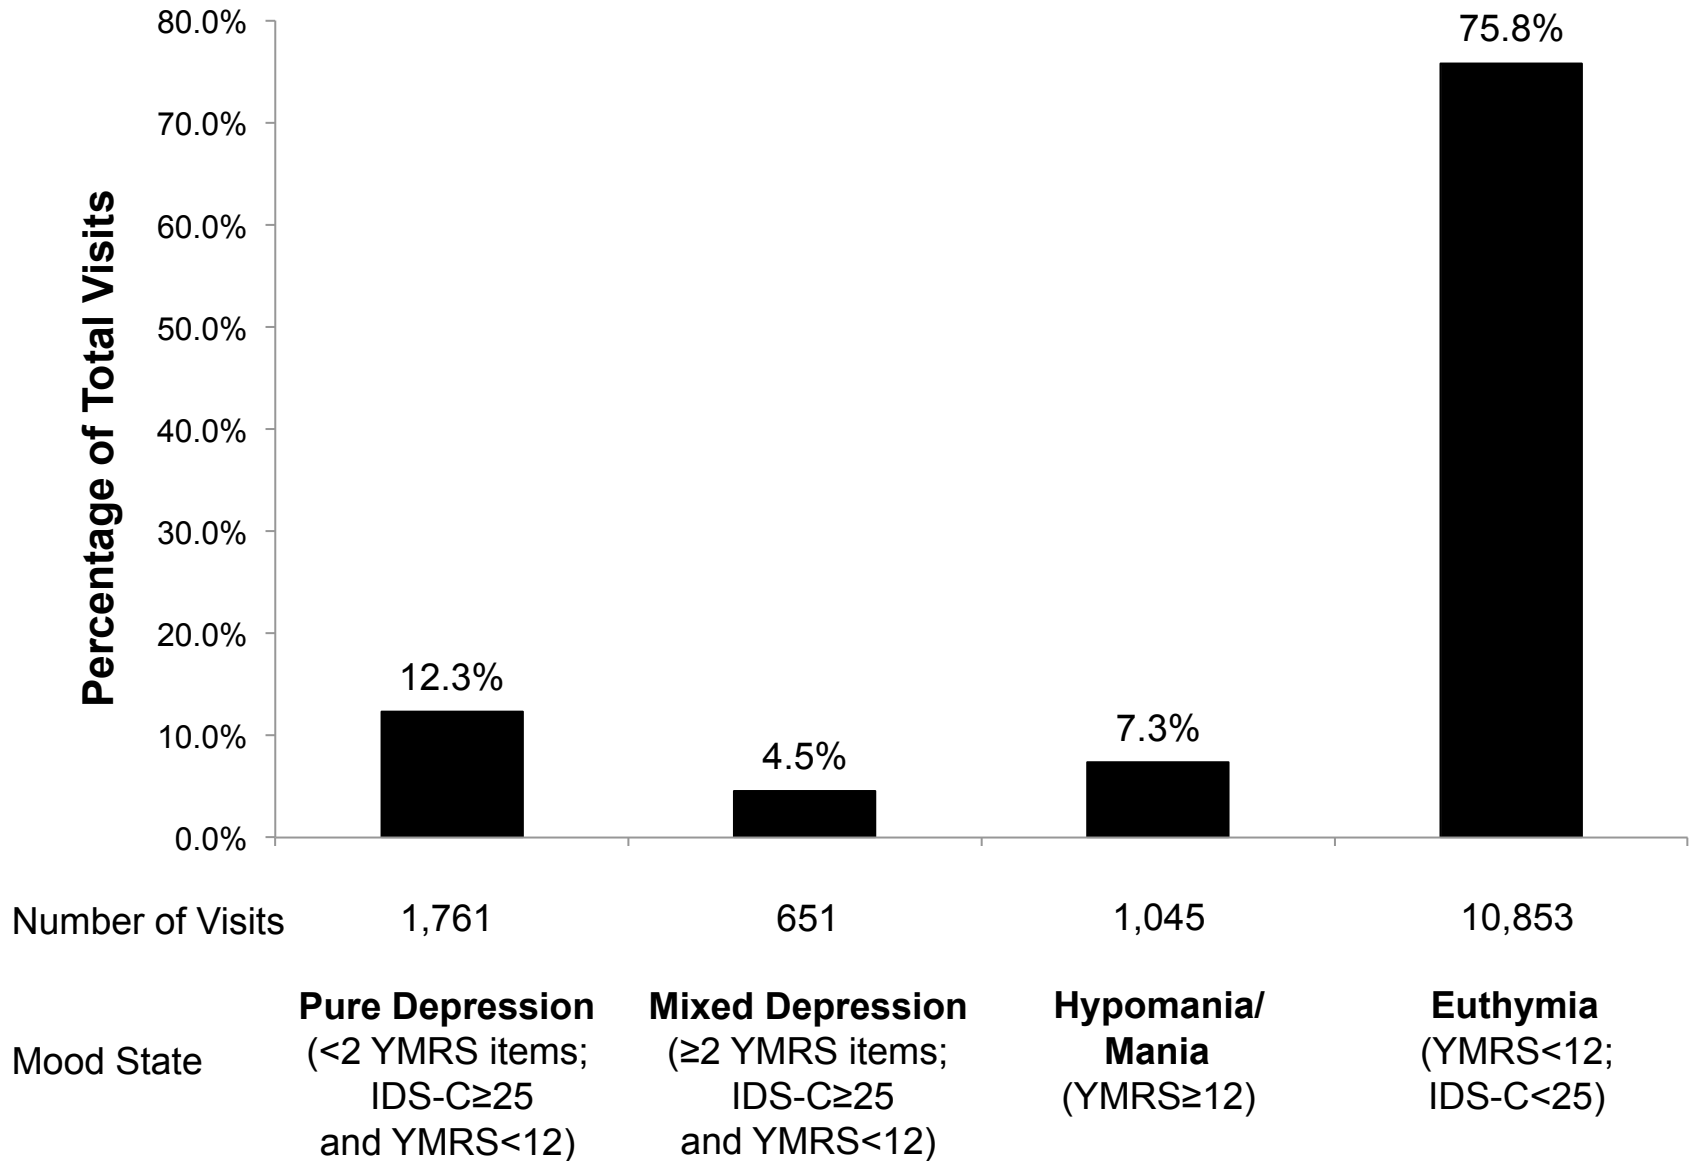

**Figure S1.**

Affective states in 907 patients during 14,310 visits, applying a 3-symptom DSM-5-based definition of mixed depression, and an IDS-C threshold of  $\geq 25$  for depression. Mixed depression is defined here as IDS-C  $\geq 25$  and YMRS  $< 12$ , with  $\geq 3$  nonoverlapping YMRS items scored 1 at the same visit. “IDS-C” indicates Inventory of Depressive Symptomatology – Clinician-Rated Version; “YMRS,” Young Mania Rating Scale.

**Figure S2.**

Affective states in 907 patients during 14,310 visits, applying a 2-symptom DSM-5-based definition of mixed depression, and an IDS-C threshold of  $\geq 25$  for depression. Mixed depression is defined here as IDS-C  $\geq 25$  and YMRS $<12$ , with  $\geq 2$  nonoverlapping YMRS items scored  $\geq 1$  at the same visit. “IDS-C” indicates Inventory of Depressive Symptomatology – Clinician-Rated Version; “YMRS,” Young Mania Rating Scale.
