

This is an excellent book. It is particularly valuable for young clinicians who are embarking on a career that will involve the treatment of physically ill children. It is both a valuable reference and an important source of practical guidance.

Corrections

At the time the article “The Impact of National Health Care Reform on Adults With Severe Mental Disorders” by Rachel L. Garfield, Ph.D., et al., was published online on February 1, 2011, the first sentence of the second paragraph of the “Postreform Changes in Coverage” subsection of the Results section misidentified one of the insurance coverage groups. The sentence should have read as follows:

“Nearly one-third (31.2%) of currently uninsured individuals with severe mental disorders would be covered under the Medicaid expansion, compared with only 21.8% of their counterparts without severe mental disorders (Figure 2).”

A correction notice was posted online with the article on February 25th. This change has been made for the article’s print appearance in the May 2011 issue and for its online posting as part of that issue.

In the article “Efficacy of Meta-Cognitive Therapy for Adult ADHD,” by Mary V. Solanto, Ph.D., et al. (*Am J Psychiatry* 2010; 167:958–968), a minus sign was omitted in Table 2. The baseline mean score for the meta-cognitive therapy group on the On Time Management Organization and Planning scale should be –40.56.
