

**TABLE S1. Five-Year Survival Rates and Hazard Ratios for Unnatural Death, by Study Cohort (All Natural Deaths Excluded From Analysis)**

Death Category and Group	Mortality				Crude Hazard Ratio	95% CI	Adjusted Hazard Ratio <sup>a</sup>	95% CI
	Yes N (%)	No N (%)	Yes N (%)	No N (%)				
<b>Accident</b>								
Offspring to either parents with serious mental illness <sup>b</sup>	11	1.5	3,106	99.6	4.46***	2.45–8.13	3.65***	1.99–6.66
Comparison cohort <sup>c</sup>	375	0.1	467,649	99.9	1.00		1.00	
<b>Homicide</b>								
Offspring to either parents with serious mental illness <sup>b</sup>	6	0.2	3,106	99.8	19.84***	8.47–46.46	19.41***	8.23–45.80
Comparison cohort children <sup>c</sup>	46	0.0	467,979	100.0	1.00		1.00	

<sup>a</sup> Adjusted for mother’s age, highest education level, marital status, diabetes, and hypertension, infant’s gender, parity, low birth weight status, family monthly income, and parental age difference.

<sup>b</sup> N=3,112.

<sup>c</sup> N=468,024.

\*\*\*p<0.001.
