

Supplemental Figure SF1. Representation of linkage-disequilibrium structure in the FKBP5 region using r^2

Note. The figure shows the linkage-disequilibrium plot of all tested SNPs using r^2 as the measure of linkage-disequilibrium. r^2 values are printed in the respective square for compared SNPs, with darker red values representing higher levels of linkage-disequilibrium. $r^2 = 1$ would indicate complete linkage-disequilibrium.
